

## PREHISTORIC SALT PRODUCTION

## Salt production, distribution and use in Prehistoric and Roman Britain.

**Dr Janice Kinory**

We rarely think much about salt now unless the GP has told us to use less of it. In prehistoric Britain, however, salt could be a matter of life or death. In this talk, you'll find out how and where salt was made in the past, see what is known about how it was distributed in Britain and discover the many uses of salt in those days. Its possible ritual uses are also discussed. You'll learn what happened to Britain's salt industry when the Romans arrived and discover how the past shaped later salt production.

Dr Kinory completed her DPhil in Archaeology at Oxford University in 2011 and published her thesis on prehistoric and early British Roman salt archaeology in 2012. She is an independent archaeologist and has been working as a research associate at the HEIR Project, School of Archaeology, University of Oxford since 2014. She regularly gives public and academic lectures on British salt archaeology and the HEIR Project digital image archive.
